

HORTAU
SIMPLIFIED IRRIGATION

“The biggest benefit we’ve gotten from using the tensiometer isn’t necessarily so much on the water savings, as much as the water timing. Before, we used to go off of visual eye sight and pressure bombs. If a pressure bomb shows it, it’s too late.”

—**Ryan Porto of Porto Brothers Farming in Kerman, CA**

On growing pistachios and almonds with precision irrigation management by Hortau.

Hortau: New, old orchards benefiting

With international and domestic demand for tree crops such as almonds and pistachios rising, growers face the challenge of maximizing production out of older orchards while nurturing the health of newer plantings in order to keep pace and stay profitable.

Hortau’s precision irrigation management system and industry-best service model is helping growers increase yields and bringing new orchards into the fold by accurately monitoring critical indicators of plant health such as soil tension and chill hours in real time via a mobile device or pc.

With thousands of units installed, Hortau has helped growers anticipate plant stressors and reduce irrigation-related costs by allowing them see what’s happening below the surface.
